Infinite Scroll - Prestashop Addon

Installation & User Manual v1.0.1

Contents

1.0 Introduction

This extension of prestashop is an integration of scrolling of product on product listing page in place of pagination.

Pagination on a product listing page is a very common feature which we see on different e-commerce websites but this plugin will make the listing of products on the product listing page a bit more interesting. When this module will be enabled the customer will just scroll down the page to view more products which are listed in the product listing page.

2.0 Installation

To install this addon, please follow the following steps:

1. Add addon folder under modules folder of your system.

2. After adding this addon folder, system will list the addon in module lisitng page under category "front office feature" as shown below.
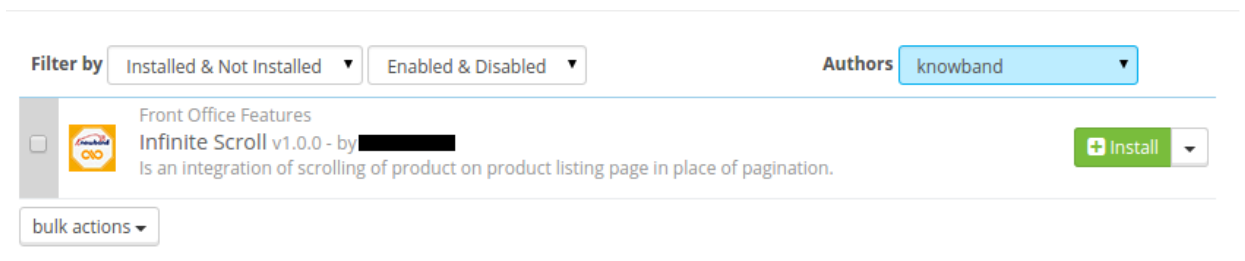

3. Click "Install" button to install plugin.

4. Module will be installed with it's default configured values.

3.0 Administration Module

In admin module, there will be following options to configure this module. The module includes 4 tabs and they are as follows.

1. General Settings.
2. Advance Settings.
3. Display Settings.
4. Selector Settings

Each section is described in details below.

3.1 General Settings

This section will be having following options to configure the module –

1. **Enable/Disable**: This option will be having a toggle button with two specific values 'ON and 'OFF. This module will only work if this is set to "ON". If this is set to "OFF" then none of the feature will work and will not impact any other section of the website. By default, this option will be "OFF".

2. **Custom CSS** : This field have been provided to allow admin to add his/her own Custom CSS in the Front End.(Product Listing page).

3. **Custom JS** : This field have been provided to allow admin to add his/her own Custom JS in the Front End.(Product Listing page).

3.1.1 How to activate module ?
Following are the steps to activate the module-

1. After installation,click on "Configure" button.

2. Go to "General Settings" tab.

3. Switch on "Enable/Disable" button to "ON" .

4. Click on "Save" button.

3.4 Selector Settings

The values in this tab needed to be correct to let the module work properly. The values in this tab are required to change according to the theme of the Prestashop used in the front. By default, the values in this tab are configured according to default theme of Prestashop.

1. **Select Item:** In this field, admin have to configure the Product selector.

2. **Select Container:** In this field, admin have to configure the Container selector which contains all the product.

3. **Select Next:** In this field, admin have to configure the Next selector.

4. **Select Pagination:** In this field, admin have to configure the Pagination selector.

**NOTE**: If the selector values in this tabs are entered wrong then the module will not work properly.

4.0 Front End Module

When the module is enabled from the admin panel then on product listing page, pagination of the products would not appear. The customer will be able to view all the products just by scrolling down on the page and if the display go to top link is enabled then the link will appear on the bottom right of the page to scroll the customer back to the top of the page.

When all the pages are loaded a message appears in the bottom which states that all the pages are loaded now.
